

“The **Secrets** That Most People Will Never Know About **Speeding Up** Their Computers...”

“The Top 5 Ways To *Speed Your Computer* and *Save Your Money On Software*”

By Kris Mainieri
www.PcSecretFormula.com

I'd like to get straight to the point and... Give you a big

Red Warning

The information contained within this document has helped me and thousands of others create faster more efficient PC's. I know that I am giving away this report for free, but don't make the mistake of thinking that this report is worthless because it's free. Nowadays too many people like yourself have been infected with the common misconception that anything FREE = WASTE OF TIME.

I plead you to take a few minutes of your precious time and read this report to the very last line of the last page. Forget about everything else for the time being... like checking your emails or wasting time on Myspace, and really focus your mind for the next few minutes on this killer report.

Those of you guys who take the time out to read this document will discover a dramatically faster computer!

Before I get started...

I gotta be straight up and tell you guys that I am NOT a professional writer or an expert in creating eBooks. I created this report in a frenzy by frantically giving my whole self and holding nothing back revealing everything, and I mean everything that I have learned.

Please pardon my occasional bad grammar and spelling mistakes and just focus on the content being revealed and fasten your seat belts as you are in for a shocking discovery and a wild ride.

– **Kris Mainieri**

Optimization Tip #1 -

Clean Up Windows

It is very important to reduce file clutter on your computer. Windows leaves lots of junk on your hard drive every time you perform a task. Furthermore - Windows runs faster when you have more working disk space.

In this first optimization I will show how to clean up your computer with a free program and extremely powerful program called CCleaner.

Download and install Ccleaner now - www.ccleaner.com/download

Run CCleaner

1. Go to Start-> Programs (or All Programs) -> CCleaner, and then click on "CCleaner".
2. Now click the "Analyze" button. This will analyze what needs to be cleaned up within Windows.
3. Click the "Run cleaner" button. (You will get a warning message saying it is going to permanently delete these files. CLICK OK)
4. Close CCleaner and restart windows.

Optimization Tip #2 -

Defragment Windows

Over time files on your computer become fragmented. This means that one file or program can be scattered in several pieces throughout your hard drive.

Windows Defragmentation utility will defragment your hard drive and eliminate "spaces" that may have been left where files were deleted or moved. It will organize all the files on your hard drive, making them easier for your harddisk to find them and in turn execute them faster.

Run this tool **at least** once a month.

Here are two important things to keep in mind before running defrag:

- Make sure you run CCleaner before you run defrag (so you don't realign unnecessary crap on your hard drive).
- Try to keep the percentage of free space over 15% on the disk you are going to defrag – this enables 'Disk Defragmenter' to complete its job with optimal results.

Run Windows Defragmenter:

1. Go to: Start → All Programs → Accessories → System Tools → Disk Defragmenter
2. Select the disk C: from the column 'Volume' in the top window and then click 'Defragment' button.
3. Note: The defrag process will take quite a while to complete.
4. Once it is complete, the new windows will pop up and tell you 'Defragmentation is complete for C'. Click the 'Close' button.
5. Repeat this process for your other hard drives and partitions.

Optimization Tip #3 -

Remove Unused Applications

1. Click on Start > Control Panel > click on "Add or Remove Programs".
2. Look through this list and see if you can spot programs you haven't used for a long time and that you know you will not use again. They are just sitting there, wasting disk space and possibly decreasing your overall computer performance. Uninstall these programs by selecting the specific program with your mouse (1) and then clicking on the 'Remove' button (2).

Optimization Tip #4 -

Turn Off Windows Indexing Service

(Free Up System Resources)

To turn off the Indexing service, follow these steps:

1. Double-click **My Computer**, point to **Explorer Bar** on the **View** menu, and then click **Search**.
2. Click **Change preferences**, and then click **Without Indexing Service**.
3. Click **No, do not enable Indexing Service**, and then click **OK**.

Optimization Tip #5 -

Turn Off System Sounds

(Free Up System Resources)

By Default Windows XP has sounds assigned to many actions on your PC. If you disable these you could be sure no PC performance is lost due to sounds.

1. Click START
2. Click SETTINGS
3. Click CONTROL PANEL
4. Click SOUNDS AND AUDIO DEVICES
5. Click THE "SOUNDS" TAB
6. Under Sound Scheme Select "NO SOUNDS"

P.S. If you'd like to get even more from your computer, be sure to check out [my click-by-click formula](#) that takes any PC and transforms it into a fast, rock solid machine in 15 minutes or less!

“How I save hundreds on software – and how you could too”

I want to show you how I save hundreds by never having to pay for software!

The secret to this is, that I use free to alternatives to software I need! I know most of you may be thinking that free software is junk, but I really want to open your eyes to a different type of software called OpenSource.

OpenSource programs are developed freely and are collaborated by a community of enthusiastic PC users who believe that people shouldn't have to pay for software.

To be honest with you, most of the open source software I use does a way better job than its “non-free” competitor, and this is because since it's OpenSource, the actual coding of the program can be tweaked and redistributed by other programmers... giving us a consistently improved and superior software.

Let me show you an example...

Instead of having to pay for Microsoft's Office Suite (Microsoft Word, Excel, Power Point etc..) I use a free and superior software bundle called OpenOffice.

OpenOffice is FULLY Compatible with all of Microsoft Office's files. That means that if you have Excel documents or Word documents, OpenOffice will open them and handle them just like Microsoft Word and Excel would.

How cool is that?

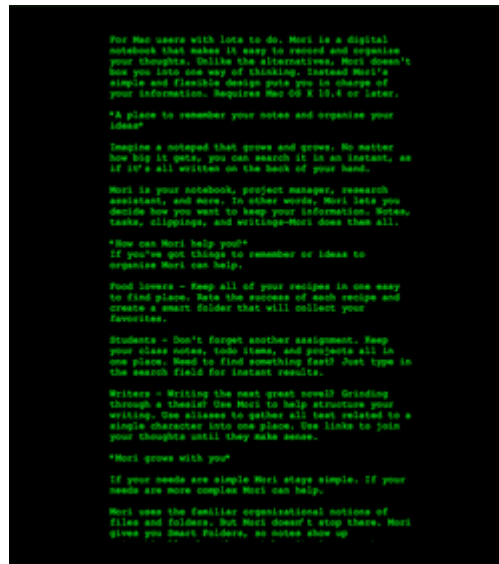

Apart from being totally compatible, it looks really similar... meaning I didn't have to “learn” how to use the program. I actually felt like I hadn't change my office suite at all!

Further down in this report, I prepared a nice little list of some Amazing “Must-have” applications for your PC.

I took the guess work out of choosing and gave you the best program for their category!

[Click Here For More OpenSource Alternatives](#)

“How one Magical Software eliminated writing distractions once and for all – this can really help with school, work, writers deadlines etc...”

This next tool is so very valuable to me and to many of the people I've introduced it to, its called DarkRoom. This tool has allowed me to write my essays for college and my ebooks in almost half the time!

How? Simply due to the fact that DarkRoom was strictly designed to create a distraction free, easy on the eyes full screen environment.

Here's the website description of DarkRoom:

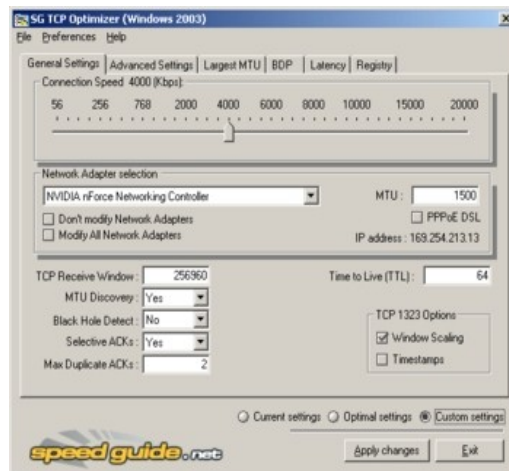

For people who enjoy the simplicity of a typewriter, but live in the digital world. DarkRoom is a full-screen writing environment. Unlike the cluttered word processors you're used to, DarkRoom is just about you and your text.

This application does NOT replace my main word processor (OpenOffice Writer) but used when I need to get things done fast or I just cant seem to concentrate!

I created a quick video looks and works, check it out!

“How to REALLY optimize your Internet speed - no more waiting for pages to load...”

By default Windows does not come optimized for fast connections like DSL and Cable, therefore tweaking will allow us to achieve its peak performance.

Thanks to the advances in today's technology, tweaking is a breeze!

Will we be using a free program called TCP Optimizer.

The TCP Optimizer is a free, easy Windows program that provides an intuitive interface for tuning and optimizing your Internet connection. There is no installation required, just download and run.

[Click Here To Download](#)

Using the program

If you do not feel like reading the [entire documentation](#), or you simply need the tweaks NOW, without spending time in learning the meaning of all those settings, you can use the Optimizer by following these short instructions:

- Choose your maximum **Connection Speed** from the slider bar (the maximum available bandwidth, in kilobits per second)
- Choose your Network Interface, or check to **Modify All Network Adapters**
- Pick "**Optimal settings**" from the radio-buttons near the bottom of the program
- Click on the "**Apply changes**" button and reboot

The Optimizer can do all the rest for you (including a backup of the current registry settings, so you can revert the changes if you wish). The new version of the program includes a preview of all changes after hitting the "Apply changes" button and before actually editing the Windows Registry.

You can also use the Optimizer to easily apply custom values, test with different settings, and learn a bit more about tweaking and TCP/IP in general. We strongly recommend getting familiar with the settings, and learning what aspects of your connection they affect first. Also, note that some of the

program tabs (Largest MTU, BDP, Latency) can be used as a learning tool without making any changes to the Windows Registry.

The 3 radio buttons at the bottom of the program show the relevant "Current settings" as set in the Windows Registry, the Optimizer recommended "Optimal settings", or allow for "Custom settings" for the more advanced user to test with different values.

Please see the [Documentation](#) for definitions and detailed descriptions of all options in the TCP Optimizer.

Note: You should be logged in with an account with administrative privileges to be able to write to some of the Registry keys and use the program to its full potential.

P.S. If you'd like to get even more from your computer, be sure to check out [my click-by-click formula](#) that takes any PC and transforms it into a fast, rock solid machine in 15 minutes or less!

"My Personal List for the BEST Must Have programs available"

In this last chapter I cut straight to the chase and give you my personal top picks to the best programs out there! Stop pulling your hair wondering which is the best antivirus software or the fastest most secure browser, I've spent countless hours testing and choosing "la crème de la crème"! When I pick a program I always think about there performance but also how it will affect the performance of windows, so rest assured that these programs are light with your resources but kick-ass! =)

Adware

Ad-Aware 2007 Free remains the most popular anti-spyware product for computer users around the world, with nearly one million downloads every week.

Our free anti-spyware version provides you with advanced protection against spyware that secretly attaches and takes control of your computer, resulting in aggressive advertising pop-ups, sluggish computer activity, even identity theft through stolen bank details, passwords, and credit card account numbers.

[Click Here To Download](#)

Antivirus

After personally testing and reviewing many Paid antivirus solutions, I have come to the conclusion that Kaspersky Antivirus is the absolute best non-free antivirus software available anywhere. Although the scan time wasn't the fastest, Kaspersky Antivirus thoroughly cover each aspect of your PC and offers unmatched protection.

Why?

Well let me give you a glimpse at what hours of testing and researching has brought forth:

1. Best detection rating against all other antivirus.

2. Uses very little resources
3. Simple easy-to-use Interface
4. Very thorough scans
5. Incredible Software support
6. 6 levels of certification
7. Support for Windows Vista™ and 64-bit systems
8. On-the-fly scanning of emails & Internet traffic
9. Instant database updates
10. Proactive defense against new malicious programs

Kaspersky offers this and so much more!

Archiving tool

The main features of 7-Zip

- High compression ratio in new 7z format with **LZMA** compression
- Supported formats:
- Packing / unpacking: 7z, ZIP, GZIP, BZIP2 and TAR
- Unpacking only: RAR, CAB, ISO, ARJ, LZH, CHM, Z, CPIO, RPM, DEB and NSIS
- For ZIP and GZIP formats, **7-Zip** provides a compression ratio that is 2-10 % better than the ratio provided by PKZip and WinZip
- Self-extracting capability for 7z format
- Integration with Windows Shell
- Powerful File Manager
- Powerful command line version
- Plugin for FAR Manager
- Localizations for 63 languages

Disk Defragmenter/Optimizer

Think of your Fragmented hard disk as a messy garage. When a garage is messy, things are harder to find and getting around in there could be tricky too. The same applies to your hard drive. When a disk becomes fragmented, Files get moved around and disorganized causing your hard disk to work harder and take longer to find and execute files.

UltimateDefrag is revolutionary defrag software that not only lets you defrag, but also considers a more important phenomenon, and that is, the placement of files and folders on your hard drive. With UltimateDefrag you can place the files you want the best performance from onto the faster areas of your hard drive and also get all of your unused data right out of the way and repositioned onto the slower areas of your hard drive in order to make way for the data that you want to place in the “hot” sections of your hard drive where performance is greatest.

UltimateDefrag lets you specify defrag and file placement routines right down to the individual file and folder level. No other defragger has previously enabled you to do this to this extent and with this kind of power and flexibility.

UltimateDefrag has a High Performance file section option so that you can get the best possible performance out the programs you want the best performance from, whether it's a particular game, program or data file. You can move these programs and files ahead of other files and folders to the area of your drive that gives you the best performance.

You choose the files that you want performance from and those that you don't or let UltimateDefrag do it for you – automatically based on file usage.

UltimateDefrag is very powerful yet very easy and intuitive to use. Once you understand the basic concepts and issues that slow your hard drive and principles that result in increased performance you can use UltimateDefrag as a powerful tool to give you hard drive file access that will perform significantly faster than what hard drive manufacturers quote for their hard drive's performance.

When done right – these principles of performance promotion, that UltimateDefrag enables you to address, all compound like magic to give you performance that you have not previously experienced from your hard drive. After defragging and optimizing with UltimateDefrag – your whole PC will respond with the speed and sprite as when it was new. You'll see the performance results instantly!

If you decide that you do not want to use all of the advanced options and simply want a fast reliable defrag, then you can also use UltimateDefrag for that purpose only. Simply select the AUTO option and you'll be enjoying what is probably the fastest and cleverest defrag engine on the market even with its approach to standard defragging which uses efficient "in- place" defragging algorithms for fast, reliable and complete defrags.

One other item that you'll find incredibly amazing about UltimateDefrag is the size of the program itself – only 1.7 Mb! You'll be amazed that so much power can be packed into such a small program. One thing that UltimateDefrag isn't and that's bloatware!

DVD Ripper/Burner

DVD Shrink

DVD Shrink is software to backup DVD discs. You can use this software in conjunction with DVD burning software of your choice (Use ImgBurn below), to make a backup copy of any DVD video disc !

[Click Here To Download](#)

ImgBurn

ImgBurn is a lightweight CD / DVD / HD DVD / Blu-ray burning application that everyone should have in their toolkit!

It has several 'Modes', each one for performing a different task:

- **Read** - Read a disc to an image file
- **Build** - Create an image file from files on your computer or network - or you can write the files directly to a disc
- **Write** - Write an image file to a disc
- **Verify** - Check a disc is 100% readable. Optionally, you can also have ImgBurn compare it against a given image file to ensure the actual data is correct
- **Discovery** - Put your drive / media to the test! Used in combination with **DVDInfoPro**, you can check the quality of the burns your drive is producing

It's a very flexible application with several advanced features that are often lacking in other tools, especially when it comes to burning DVD Video discs. It supports all the latest drives without the need for updates (including booktype / bitsetting / advanced settings on many of the major ones - i.e. BenQ, LiteOn, LG, NEC, Plextor, Samsung, Sony).

Firewall

ZoneAlarm

I LOVE when I come across articles that support my reviews, Yes ladies and gentlemen your current firewall sucks! :-)

Microsoft users believed that with the much awaited arrival of "Windows XP Service Pack 2", security issues would vanish. NOT. Let me show you a couple of things my Friend David Berlind had to say about windows "security update"

[SP2'S Firewall Is Not Good Enough](#)

-Note how he tells you that Zonelabs were the first to take action :)

Now do you know why I LOVE THIS SOFTWARE?

This powerful easy-to-setup firewall is short from amazing! This incredible shield is designed for Internet dummies yet offers the protection experts could truly appreciate.

With the protection and versatility this firewall offers, securing configuring and monitoring your Internet is easier than ever.

Some things that I noticed and liked from this software:

1. Protects surfers online and off.
2. Halts threats before they infect your PC.
3. Simple to configure and use..
4. Over 7 "Best Protection" Awards.
5. It lets me open ports quickly and easily.
6. The Money-Back Guarantee is a relief. (Wont need it.)
